YOUR REXAIR – MADAM!

GREATEST SINCE THE RADIO . . .

▶▶▶ BUILT LIKE A GIANT

DUST LADEN AIR CAN NOW BE WASHED CLEAN

An eminent authority states that the average city dweller breathes in approximately nine hundred million sub-microscopic dust particles every minute. Those in the country breathe somewhat less. Ten per cent of these particles never leave the lungs. THE REXAIR TRAPS AIR BORNE DUST in its original and distinctive water bath, where with the aid of REXSAN, a safe but powerful germicide, contaminating elements can be destroyed. It also provides the means for removing dust from the principal sources that supply atmospheric dust in the home—dust in carpets, furnishings and fixtures. Air recirculated by Rexair is dust-free, safe and wholesome to breathe. While passing through the water bath, harsh, dry air is moistened to become a valuable aid in the humidification of the home. RUN THE REXAIR WITHOUT UTENSILS FOR THIRTY MINUTES EVERY DAY.

NATURE AND SCIENCE COMBINE

The
REXAIR
CONDITIONER and HUMIDIFIER

☞ Your Rexair is the zenith of modern sanitation and home conditioning. It is not a new way of doing an old job. It is one of those brand new technological developments that masters a field heretofore untouched—the control of house dust and its contaminating contents.

☞ Fourteen years of research and experimentation have gone into the development of this modern giant, the greatest invention since the radio. Many thousands of dollars have been expended to make this service available at a price within reach of all people. It comes into your home as a proven benefactor and servant. Learn its possibilities and increase the capacity of your family for enjoyable living.

☞ A basin of agitated water and a powerful assembly for creating a cyclonic wind combine to extract and confine atmospheric dust, floor dust, furnishings dust, in fact, all dust from the floor of the basement to the ceiling of the attic. At the same time, clean and moist air is forced back into the area of operation. **IT GATHERS AND IMPRISONS DUST IN WATER.**

☞ It is axiomatic that wet dust cannot circulate in the air. The use of water to keep down dust is as old as man's battle against dust. Sprinkling the street and dampening the broom before sweeping in the good old days are but two examples. The Rexair makes **MUD OUT OF DUST.**

☞ You will marvel at its uses as well as its simplicity. An occasional casual study of this booklet will return you large dividends in healthful and economical living.

AND FURNISHINGS

TRIPLE GUARD AGAINST DUST

THE MUFLER

an especially designed silencer and safety trap. Mechanical noises are muffled and it is a guard against carelessness or neglect.

THE SEPARATOR

Whirling at 12,400 revolutions per minute this centrifugal separator churns up a water spray, separating it and even the most minute particles of dust from the air. This is exclusive with Rexair.

WATER BASIN

Dust and other foreign substances taken into the Rexair are forced down into this whirling water bath by Rexair's powerful air stream entering through a conducting rubber tube. Thus, discharged air is first water washed, then mechanically separated and finally passed through a safety muffler. WET DUST CANNOT FLY AND MOIST AIR IS HEALTHY AIR.

**3 POWERFUL
AIR
IMPELLERS**

**WATER—SEPARATION—
COMBINATION MUFLER**

CAPTURE DUST BEFORE IT REACHES THE AIR

A GLIDING CYCLONE ▶

Grasp wand at arm's length and swing floor tool back and forth over rugs as illustrated. Surface and imbedded dust will be quickly and easily trapped in the water by a powerful portable air stream. If surface threads or animal hair proves bothersome, snap it up as you come to it at the same time by raising wand as far as it will raise. (See outline in illustration.)

◀ ATTACH HOSE

The Rexair hose is provided with a half turn aluminum coupling which is securely locked in place after its connection. Place this connection directly into the intake orifice of the machine with the smooth section of the edge up and turn to the right until snug. To release, press the small lever lock directly over the intake and turn the connection to the left and pull out.

◀ JOIN WANDS

Insert the tapered end of one wand into the slotted end of the other. This applies to both curved section and the straight sections.

ATTACH CARPET TOOL ▶

Insert the tapered end of the straight wand into the carpet tool connection. A slight twist will make it secure.

REXAIR PROVIDES CLEAN LIVING CONDITIONS

OUT OF UPHOLSTERED FURNITURE INTO ► THE WATER

Strike an upholstered piece of furniture with your hand, in the sun's ray, and you will discover one source of dust. To remove it attach the upholstery nozzle to the curved section of the wand and go over the article thoroughly, making certain that all crevices are thoroughly cleaned. This is also an important step toward avoiding moths, which breed in dust and dirt. With Rexair you can put all dust into water.

◀ DRAPES—HANGINGS

The nature of the materials and their position in the home make drapes and hangings susceptible to the gathering of dust. The upholstery tool, coupled with one or both straight wand sections, makes this cleaning task an easy one without possible damage to the material. This dust, like all other household dust, is carried into the water bath and never flies again.

THE MACHINE OF MANY USES

◀ AS A VAPORIZER

Vapor from volatile medicants such as menthol crystals and eucalyptus oil, may be produced from your Rexair by adding such ingredients to hot water in the base of your machine and running it as directed.

FOR SLEEPING COMFORT ▶

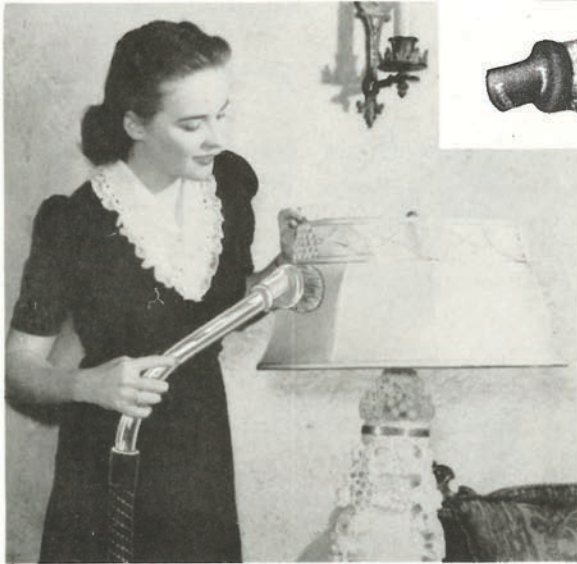

When troubled with respiratory congestions use as a vaporizer in the bedroom for twenty or thirty minutes before retiring and notice the increased possibilities for a comfortable night's rest.

EFFECTIVE DISPOSAL OF HOUSEHOLD DUST

CLEAN AND ATTRACTIVE VENETIAN BLINDS ►

Often considered a difficult and laborious task, removing dust from venetian blinds is a simple, easy problem with the Rexair. Dust and grime are quickly disposed of by use of the dusting brush and the hurricane air stream of the Rexair, and is **ONCE AND FOR ALL TRAPPED IN WATER.** Dust each slot individually from side to side. Dust the straps also. The breeze can then never blow this dust into the air you breathe.

◀ LAMP SHADES

Because of their delicate construction, lamp shades are often neglected. Surprisingly, too, their large area makes them convenient dust catchers and spreaders. The soft bristles of the Rexair dusting brush makes regular care of these beautiful fixtures a pleasure. You will be repaid for this simple operation with better illumination and cleaner air. In fact after a few weeks you will not have to dust. Rexair's powerful free air stream buries this dust in water. **IT CAN NEVER REACH THE AIR.**

DUSTING INTO AIR—OR INTO WATER

◀ A brilliant light will reveal the air contamination and wasted effort in the use of the conventional dust cloth. The illustration to the left vividly substantiates this.

Effective, once and for all disposal of household dust is made possible with the Rexair. The soft bristles dislodge the dust and the powerful suction buries it in the "water bath." It cannot be wiped or spewed into the air again. ►

RUGS, FLOORS, FURNITURE AND FIXTURES

◀ CARPETED AND BARE STAIRWAYS

The Rexair rests securely on any stairway and permits you to gather dust from the bottom to the top step with ease. Stair carpets are subjected to much more scuffing and wear than other floor coverings and as a result are responsible for raising an even greater quantity of dust in the air of the home. The carpet tool attached to a single straight section of the wand is a convenient means of getting all the dust in a carpeted stairway. On bare stairways substitute the floor brush for the carpet tool. It will transfer the dust to the water also, where it is **THROUGH FLYING FOREVER.**

GETTING DUST UNDER LOW FURNITURE ▶

Rexair's "easy glide" floor tool enables you to clean under low furniture easily and with the assurance of full power and positive contact with the floor covering at all times. It is not necessary to move articles of heavy furniture which have even as little as two inches of space under them. Dust taken from these locations finds a final resting place in Rexair's water bath, from which it **NEVER RETURNS.**

◀ BARE FLOORS OF WOOD, TILE OR LINOLEUM

Wood floors, tiles and even linoleums are more quickly and easily sanitized with Rexair. Merely mopping or washing these surfaces permits quantities of dust to fly into the air or remain in cracks or crevices. The long lasting bristles of the floor brush, aided with Rexair's powerful air stream, remove both surface and imbedded dust and grit with dispatch. It is gone forever with the Rexair's system of sanitary disposal. **WET DUST WILL NEVER FLY.**

REXAIR'S EXCLUSIVE WATER BATH CAPTURES ALL DUST

REMOVE DANDRUFF ◀ MASSAGE SCALP

By removing the bristles from the dusting brush and attaching the rubber portion to the end of the curved wand (after sterilizing) and using the Rexair's powerful suction, dandruff is easily removed. You will find the rubber brush holder soft, pliable and ideal for a thorough scalp massage. Attached in this manner it is equally useful as a vibrator on chest, neck, etc.

SANITARY BEDDING ▶

As a fair estimate, one-third of the average lifetime is spent in bed. Accordingly, it is vitally important that mattresses and pillows be dusted and renovated frequently, which is a convenient and entirely sanitary operation with the Rexair. Dust taken from bedding is forever disposed in Rexair's water bath. In addition, the powerful air flow rejuvenates your pillows and mattresses, keeping them soft, fresh and comfortable and dust free.

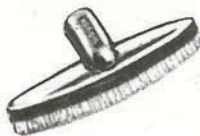

USES THAT LEAD TO COMPLETE SANITATION

◀ MENTHOLATING CLOSETS

The use of menthol crystals, camphor, oil of lavender or other deodorants in clothes closets can be handled most effectively with the Rexair. Best results are obtained with hot water. Close the door and allow the machine to run from ten to twenty minutes. REXSAN, the pleasingly scented germicide used exclusively in the Rexair water bath, is also an excellent deodorant. It puts that fresh air scent in dead spaces.

CLOTH AND FUR COATS ▶

Winter wearing apparel gathers an almost unbelievable amount of dust, smoke and grit in a comparatively short time. Both cloth and fur coats can be maintained in excellent condition by regular use of the upholstery nozzle, as shown in the illustration, and at a notable savings. If garments have not been treated against moths it is wise to dust them frequently in this fashion.

Winter garments, blankets, etc. can be safely stored at home if first thoroughly dusted and treated with REXIDE.

BEAUTY TREATMENT FOR CARPETS AND RUGS

SHAMPOOING CARPETS AND RUGS

The utensils for use with the Rexair also provide the means for removing dust smudge. Attach hose to exhaust. Insert curved wand. Fill sprayer with Rexair dressing, attach to wand, start machine and cover the slot at the top of the sprayer with your thumb, and spray the rug until it is completely covered with a heavy dew. To shut off the spray entirely remove the thumb from the slot and raise the sprayer nozzle slightly above horizontal position. The density of the spray is controlled by the nozzle screw. Clean carpets give off no dust.

THERE IS NO CAKING ►

After thoroughly spraying the carpet with the Rexair Rug Cleaner, attach the straight wand sections and the floor brush to the curved section of the wand and brush the shampoo into the nap. After the shampooing is completed and before the rug is dry, attach the hose, snap on the switch and Rexair will remove all damp sludge, depositing it into the water basin and drying the rug with the air stream. Remember—Rexair handles dust, air and water.

CLEAN, SPARKLING FLOORS WITHOUT EFFORT

◀ SHAMPOO LINOLEUMS AND TILE FLOORS

Here is a quick and easy way to clean, sparkling linoleums and tile floors. Fill the sprayer with warm water in which two tablespoonfuls of Rexair Liquid Shampoo have been mixed. Attach the sprayer to the curved wand section with the hose connected to the exhaust outlet of the machine, and spray the floor freely. If one jar covers, refill the jar with clear warm water only and spray it over the shampoo. Use the floor brush on the two straight wand sections to loosen the dirt. Then connect to machine intake with hose and put all the sludge into the water.

Rexair Rug and Upholstery Cleaner and Dressing. A concentrate.

REXSAN
A powerful germicide. Possesses a germicidal power four times that of carbolic acid (phenol) in like dilutions. Rexsan also imparts a fresh, clean "piney" odor to the rooms where used.

THE UTENSILS ARE EASY TO USE

◀ BREEDING GROUND FOR MOTHS

A favorite breeding ground for moths and an often neglected portion of the room is where carpeting meets baseboard along the walls. Ordinarily this spot is overlooked, but Rexair handles the task with ease. By using one or both sections of the straight wand and attaching the radiator tool to the end of the wand, all dust (breeding ground for moths) is quickly removed and buried in the Rexair water bath. The flat radiator tool also serves an important purpose in getting dust out of upholstered furniture, as all dust can be quickly and easily removed in the hard-to-get-at places without so much as removing cushions. By using the radiator tool only on the curved wand, dust is easily removed from the almost inaccessible parts of radios, pianos, and other carved or delicate fixtures are easily cleaned with this tool, plus Rexair's powerful suction. Rexair gets all of the dust into the water.

CARE OF PETS ▶

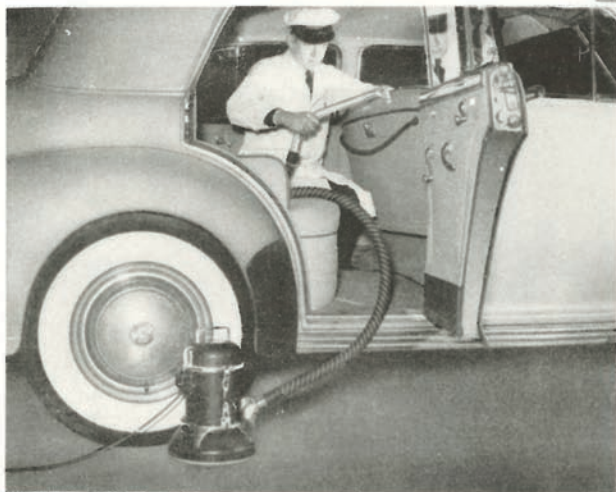

The powerful Rexair is used extensively in the care of horses and cattle, also dogs and other pets. The upholstery nozzle affixed to the curved wand section and the hose attached to the suction intake of the Rexair offers an easy and thorough method of cleaning animals. The dust is removed from the coat of hair and drowned in the Rexair water bath. Notice the satisfied look on Duke's face.

◀ AUTOMOBILE INTERIORS AS DUSTLESS AS YOUR HOME

Automobile fabrics are almost constantly exposed to dust, soot and other forms of dirt. If unkept they are inclined to show age before the exterior of the car has lost its luster. Dust continues to circulate in the interior of the car while in motion and is more firmly imbedded into the upholstery through this action. Superficial surface brushing has little effect. The use of the Rexair and the upholstery nozzle pulls the dust from the fabric and disposes of it in water. The original sheen returns and the danger of moth infestation is minimized.

Automobile upholstery may be effectively shampooed through the use of the sprayer and REXAIR RUG SHAMPOO. Wetting can be thorough as all water and suds are easily drawn from the fabric by Rexair's powerful suction. Use the upholstery nozzle on the curved section of the wand to draw the water into the water basin. Rexair handles water as easily as dust.

THE HOME SAFEGUARDED AGAINST MOTHS

MOTH PROOF VALUABLE FURNISHINGS AND VALUED POSSESSIONS

The new Rexide, if applied to materials by the Rexair sprayer, provides immunity against moths for two years. The presence of Rexide cannot be detected as it is odorless and neutral chemically. It does not affect color or texture nor does it powder off, crystallize or stiffen fabrics. Fill the sprayer jar with REXIDE and spray the fabric until it is thoroughly damp to the touch.

REXIDE

Rexide is packed in three convenient containers and available through Rexair offices in principal cities.

Only a few cents per square yard covers the cost of a thorough treatment of Rexide's protection to carpets, cloth, fabrics or furs. Rexide will not deteriorate with age and is not affected by light or heat.

WAXING PROTECTS WOOD FLOORS, TILES, LINOLEUM

REXGLO

◀ WAX WOOD FLOORS, TILE, LINOLEUM

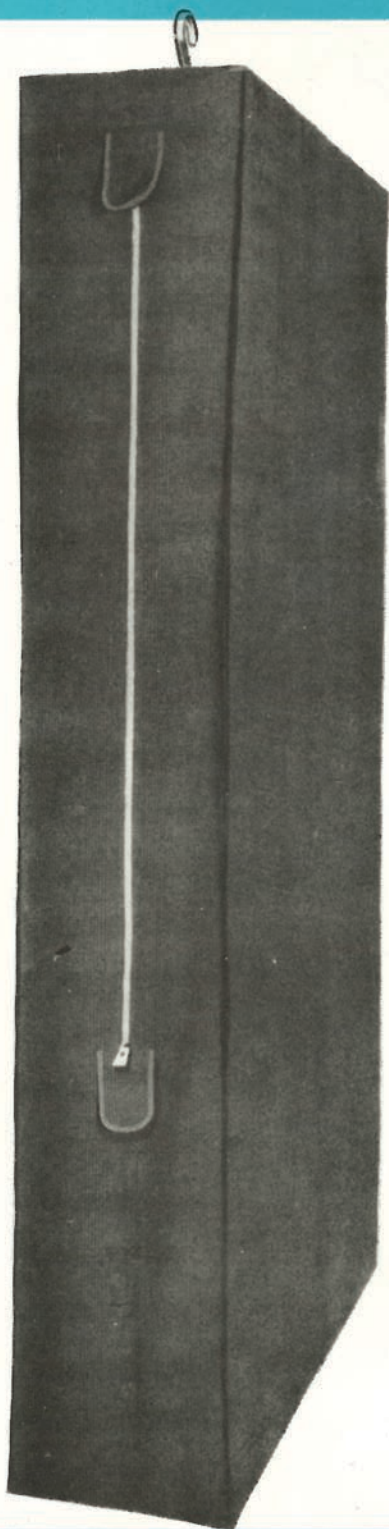

The Rexair sprayer attached to the curved section of the wand and the hose inserted in the exhaust connection, provides a means of spraying liquid floor wax more evenly and thoroughly. The recommended wax for this purpose is REXGLO—because of its long lasting, high luster and non-slip qualities. REXGLO needs no rubbing or polishing. Then spray Rexglo on in a fine mist and let it dry. Waxed floors keep down dust.

PREPARING FLOORS FOR WAXING ▶

Use of the floor brush with the hose attached to the suction intake is advisable before all waxing operations. This removes all surface dust as well as that in cracks. The wax seals it that way.

THE MOST PERFECT AIRING AND STORING CONTAINER

◀ THE AIRET

Made of unusually strong suede material, handsomely designed and exceptionally roomy, the AIRET is without question the finest garment bag obtainable. Your clothes or furs are fully protected against moths. The AIRET is sufficiently long to accommodate almost any length coat or gown without folding. There is ample room for a half dozen heavy winter coats. From eight to ten men's suits or as many as twenty dresses can be stored conveniently. A sturdy wire rack is provided in the bottom of the AIRET for the storage of ladies' slippers or men's suede shoes. The extra long zipper and its center position allows easy access to any garment. It is inexpensive moth insurance. Simple instructions are packed with each AIRET.

PRICE - \$12.50

MAINTAIN YOUR REXAIR THIS

WATER BATH

Before each use, fill the water basin with clean water to the marked level. The combination of air and water provides nature's method of air purification. Add a few drops of REXSAN to the water. REXSAN is a powerful but safe germicide with a soft, pleasant odor of pine.

SIMPLE

To release or to secure the water basin on the Rexair adjust the two lower clamps, as shown in the above illustration. The spring tension assures a perfect seal against possible air leakage.

CONVENIENT

After the clips are released the power unit is removed from the water basin and placed on the floor. The unit itself is provided with four sturdy legs which prevent the separator from coming in contact with the floor or rug. Because of the contour of the connecting surfaces there can be no error in replacing the power unit properly.

SANITARY

Empty and dry the water basin after each use of the Rexair. If doing heavy work in large areas, empty when water is saturated with dust. Into the sewer goes all dust and its germs. The water basin can be kept spotlessly clean.

SIMPLE AND CONVENIENT WAY...

▲ Your Rexair can be kept as clean as your dishes at all times. After emptying the water basin, wash and dry it thoroughly. Also wash and dry the rubber diaphragm. Thus you may maintain the efficiency and sanitary qualities of your Rexair.

THE SEPARATOR

Here is the heart and lungs of your Rexair. These lungs can be kept spotlessly clean. That means maximum air movement always. After each use just turn the brass separator screw to the left and lift the separator off. Hold it under the faucet, using a small brush or a rough cloth to wash it inside and out. After drying, store it in the water basin as shown at the bottom of this page until the next use.

◀ The Rexair power plant can be stored wherever desired with no danger of contamination to the finest articles. It is provided with four legs for that purpose. However, we recommend the storing of the water basin, diaphragm and the separator in a place convenient to both filling and emptying, preferably under the sink as shown in this illustration. **DO NOT STORE THE REX-AIR AWAY ENTIRELY REASSEMBLED.**

REXAIR SALES & SERVICE ARE ONE

Your purchase of the REXAIR is appreciated, but that does not mark the end of the relationship. A correct understanding between you and the seller will insure years of service from your purchase. Please observe these suggestions.

1. Should service or supplies be required, consult your telephone book for REXAIR SALES AND SERVICE, or REXAIR, INC. If you fail to find it there, and do not have the address of a nearby branch, drop a postal card to Rexair, Inc., 319 Fisher Building, Detroit. DO NOT CALL GENERAL REPAIR MEN. Only authorized Rexair service Branches have genuine parts and the special tools required for installing new parts and securing the perfect balance and alignment essential for efficient performance. DO NOT PURCHASE SUPPLIES THAT DO NOT BEAR THE REXAIR LABEL.
2. Money for service or supplies should not be paid to ANYONE except an authorized service representative with credentials from the REXAIR branch, and you should secure a receipt for each transaction.
3. No one except such a representative should take your machine out of your home. You should not ship your machine to Detroit or elsewhere without authorization from such point.
4. If you purchased on the deferred payment plan, mail or deliver your monthly payments to the office shown on the statement you receive. DO NOT MAKE THESE PAYMENTS IN ANY OTHER WAY EXCEPT TO AN AUTHORIZED REXAIR COLLECTOR.

All of the above suggestions are for your protection. Many impostors travel the country claiming to be service men and collectors for various concerns. Ask to see the credentials of any man who claims to represent Rexair and if in doubt, contact the nearest REXAIR office before making any commitments.

Your good will, merited by proper and continuous service, is the object of the management of Rexair, Inc.
